i think it is technically possible for an app to replace the screen for later boots; john, do you think we should look at making this harder?

they cannot in the original boot .this is called the win experience, afterwards the enduser could change it if they would write an APPS.

Subject: windows logo screen

total hack thought: you can bet that nscp will try to replace the win95 logo screen. do our oem agreements require that this not be replaced? might we think about changing the logo screen formats so that windows checks for a signature on the logo file?
