>Subject: microsoft
>
>i just talked to a friend from compaq who is the product manager in charge
>of presario. she makes the decisions as to what products to put in. she
>said that they want to use netscape as the only browser, but that microsoft
>hard-coded explorer into windows 97 so that they are unable to remove it.
>she also said that when she was in early discussions with them they told her
>that they didn't care what compaq wanted to do, that they would just put it
>in windows and compaq would have to live with that.
>
>also, she said that ms requires them to reveal their product plans early so
>that they can get the right drivers written, and then they turn around and
>take features from the compaq product plans and make them parts of the
>minimum hardware specification for windows, so that all the hardware vendors
>become as undifferentiated as microsoft can manage.

>in terms of activex, she said that she thought that activex was going to be
>the standard, and that compaq is trying to optimize their machines for
>activex. i asked why not java and she said that ms was going to use activex
>for every app talking with other apps, not just internet stuff, so they have
>no choice. it sounds like the OLE/activex distinction is going away, and
>that the hardware vendors (at least compaq) are seeing activex winning the
>internet war because of ms' dominance over the other parts of the computer.
>
>in my own experience, i saw a colleague try to view a gif yesterday from his
>windows95 machine. it has the default (on new machines) viewer for gifs as
>internet explorer, and when he doubleclicks on the gif it brings up a dialog
>which has as the default "use ms explorer as your standard internet
>browser". it's a devious way of getting people to unconsciously switch
>internet browsers when they're just trying to innocently view a picture.
>
>this all bothers me because it's anticompetitive.
