Microsoft Settlement is great for consumers. I do not see that Microsoft was at fault in the first place. Judge Penfield Jackson just used his personal opinions arrive at a rash judgement. His judgement should have been thrown out atleast after listening to his post trial comments.

I am a Technology Consultant and I know how SUN & Oracle loot Companies with thier high priced products. AOL -- Look who is talking about misusing monopoly. AOL refused to let other instant messengers to integrate with their version. Their advertisements say "all my friends are in AOL (basically their instant messenger)", saying that if you do not take AOL internet access you will miss out on istant messages to your friends. Is this not misusing monopoly? Is this good for consumer?

Let companies compete in marketplace. Not go to governament for help compete.
